# CSV Exporting

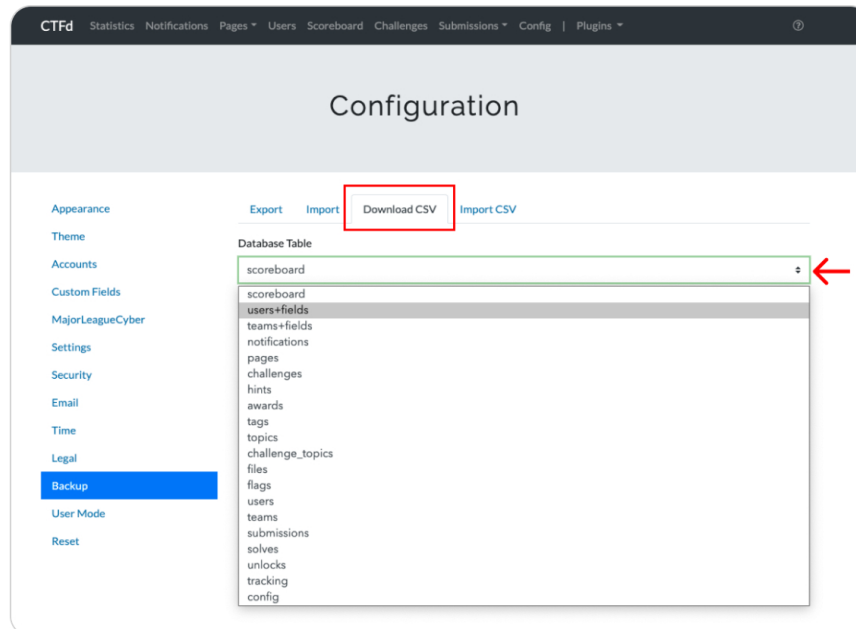

Admins can also export select data in CSV format for analysis or to share specific data. Some options include, exporting user data and their custom fields, the scoreboard, challenges, and more.

## DANGER

CSV data exported from CTFd is not intended to be directly imported back in via CSV importing. The CSV downloads have a different format than what's required for importing.

The sections are exported with relevant adjacent data, for example the challenges export includes the challenge description, connection info, max\_attempts, value, category, type, state, and required challenges.
