Exports > CTFd Exports

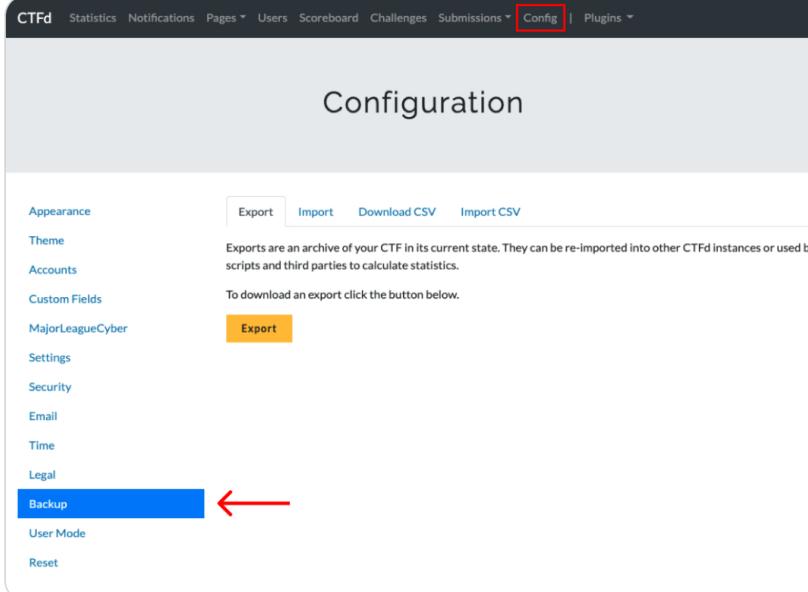

CTFd Exports

CTFd has the capability to export all instance data as a zip file for archival purposes. This zip file can be imported back into CTFd to restore the instance that was exported. When destroying a hosted CTFd instance, always make sure to create an export as a backup.

Exporting from CTFd

In order to create a CTFd export you must be an admin.

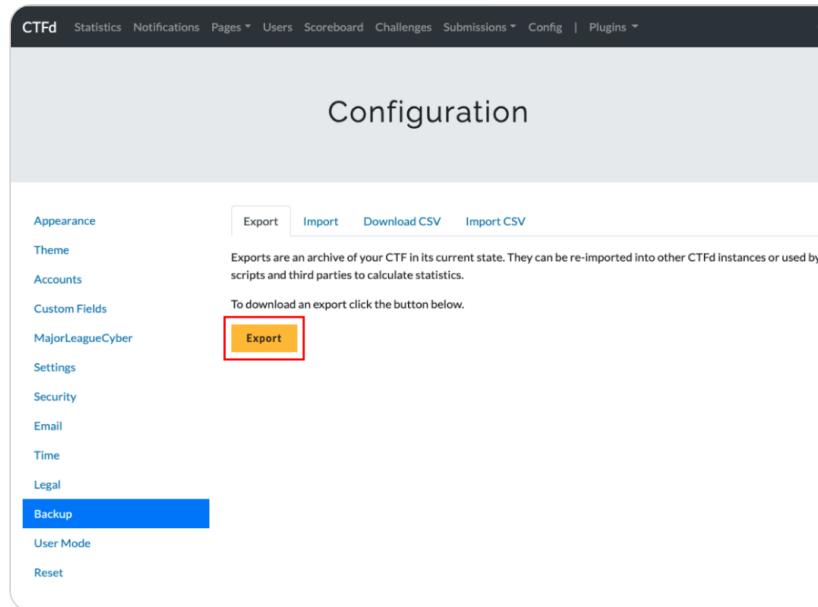

1. Go to the Admin Panel by clicking the Admin button on the top right.
2. Click on the Config tab in the top right corner
3. Click the Backup tab

Exporting from CTFd

4. You can use the Export tab to export the **full instance** or you can use the Download CSV tab to **export specific data**, including user data + custom fields, for analysis.

Click "Export" and you will download a zip file of your instance. The zip contains json files of your instance.

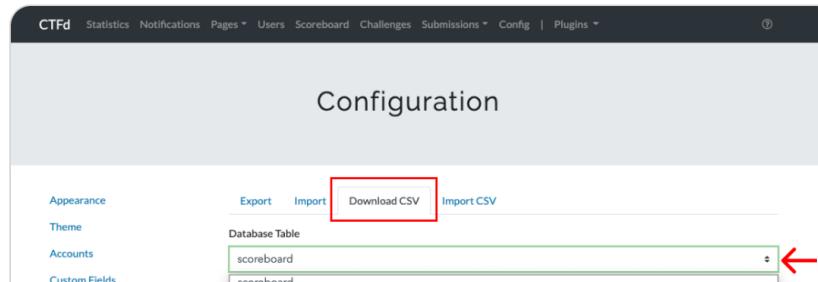

The screenshot shows the CTFd Configuration page. On the left, there is a sidebar with various settings: Appearance, Theme, Accounts, Custom Fields, MajorLeagueCyber (which has an 'Export' button highlighted with a red box), Settings, Security, Email, Time, Legal, Backup (which is highlighted with a blue bar), User Mode, and Reset. At the top, there are four tabs: Export, Import, Download CSV, and Import CSV. Below the tabs, there is a section for 'Theme' and 'Accounts'. Under 'Custom Fields', it says 'To download an export click the button below.' followed by the 'Export' button. The 'Backup' tab is currently selected.

⚠ INFO

If you would like to run queries on your data, you can install the CTFd export on a local CTFd instance. This will give you a db file you can run queries on.

The Download CSV tab has a dropdown menu to select what you would like to export.

The screenshot shows the CTFd Configuration page with the 'Download CSV' tab selected. A dropdown menu is open, showing 'Database Table' and two options: 'scoreboard' and 'environment'. An arrow points to the right side of the dropdown menu.
