

JavaScript

manifest.json

In your `vite.config.js` you must enable the `manifest` flag. The generated manifest file is expected to be in the `static` directory. CTFd will use the generated `manifest.json` file to render `<script>` tags when your template uses the `Assets` constant helper.

For example, if your `manifest.json` looks like:

```
{  
  "assets/js/index.js": {  
    "file": "assets/index.4c3687bd.js",  
    "src": "assets/js/index.js",  
    "isEntry": true  
  }  
}
```

by calling `{{ Assets.js('assets/js/index.js') }}` in a template, you will get something like the following output:

```
<script src="assets/index.4c3687bd.js"></script>
```
