CSV Importing

CSV Importing

You can currently import Challenges, Users, and Teams using a CSV file. Unlike regular CTFd imports, anything imported via CSV will not remove existing content.

If you go to the `Admin Panel -> Config -> Backup -> Import CSV` page, you'll see the options to import CSV files.

The screenshot shows the 'Configuration' page in the Admin Panel. At the top, there are tabs for 'Export', 'Import', 'Download CSV', and 'Import CSV'. The 'Import CSV' tab is highlighted with a red box. Below this, there's a section for 'CSV Type' with a dropdown menu set to 'Users'. Under 'CSV File', there's a 'Choose File' button with the placeholder 'No file chosen' and an 'Import CSV' button below it. On the left side of the page, there's a sidebar with sections like Appearance, Theme, Accounts, Custom Fields, MajorLeagueCyber, Settings, Email, Time, Legal, and a prominent 'Backup' button which is also highlighted with a red box. At the bottom of the sidebar are 'Reset' and 'Backup' buttons.

You can fill the sample CSV files below with your data to ensure the import is properly setup for the import.

Examples

Users

All columns required

[Users CSV Template](#)

Teams

- Examples
- Users
- Teams
- Challenges

All columns required

Teams CSV Template

Challenges

The `description`, `flags`, `hints`, and `tags` columns are optional. If you are creating a standard challenge, `type_data` is also optional
