Templates

`ctfcli` contains pre-made challenge templates based on cookiecutter to make it faster to create CTF challenges with safe defaults.

```
ctf challenge new
                ├── binary
                ├── crypto
                ├── programming
                └── web
```

```
❯ ctf challenge new binary
/Users/user/.virtualenvs/ctfcli/lib/python3.7/site-packages/ctfcli-0.0.1-py3.7.egg/ctfc
name [Hello]: buffer_overflow

❯ ls -1 buffer_overflow
Makefile
README.md
WRITEUP.md
challenge.yml
dist/
src/
```

Contributions welcome on improving the challenge templates to make CTF challenges better for everyone!
